Junior Python Backend Developer

Sweet Digital | A Making Science company

01/2022 - 07/2022

- Created an API that generates Code from OTP URI Inputted by the client

Technologies: Django Rest Framework,JWT
auth(DJ-Rest-Auth),Docker,Git,Linux.

- Have developed a website where user can login and register with JWT token,after that todos can be created/edited and marked as done,Todos are filtered by access levels(Public,Mentor,Team),also stack name is connected to the user profile.Also there is a Todo detail page and the time when Todo was created and updated.Finally there is an activity feed with pagination.Also I used Django Fixtures which automatically write content in database after docker container is started.

Technologies: Django,DJ-rest-auth,Html,Css,Docker,Git,Linux

- A platform where user can register and Login,also user can create,update and delete post.There is also Post filtration by category and a profile page with the posts user has.Also there is a product detail page where user writes some description about a product and uploads an image

Technologies: Django,DJ-rest-auth,Html,Css,Docker,Git,Linux

- Have Done some Database Automatisation Tasks in company's internal Project.

Technologies: Postgresql,Django,Docker,Docker-Compose,Linux.
